

# THE DOG'S IDEAS CHRISTMAS

## Wish List!

### STOCKING STUFFERS

The favorite fur baby needs a stocking too. Fill the stocking with an assortment of homemade dog treats.

### COMPLEX BALLS

Complex balls will not only stimulate the brain of your dog but also train them to play catch. There are different types of balls that contain nodules and have been instilled with sound effects. The sound effects are produced when the ball is thrown or rolled. When they make sounds, a dog's brain is stimulated and compels the dog to catch the ball.

### ROPE TOYS

Rope toys help to stimulate a dog's competitive side. Hold a rope toy on one side and let your dog pull. The pulling of the rope is great fun for the dog. The dog will want to pull the whole rope to its side. Rope toys can be easily chewed by dogs. The chewing helps to keep the dog busy and occupied.

### TREAT PUZZLES

Treat puzzles stimulate a dog's brain and help to develop thinking skills. Stuff the fun and interesting puzzles with treats and the dog will be entertained while figuring out how to release the treats from the puzzle.

### MULTI-SENSORY TOYS

These are toys that target an improvement of sensory senses in a dog. Toys that make noise for instance improve the communication skills of a dog. A bone also stimulates the brain of a dog. It helps to make it active and alert.
